Heatmiser neoAir v2 WH Wireless Smart Thermostat

The Heatmiser neoAir v2 is our programmable wireless thermostat. When paired to the neoHub (sold separately) you can control your heating and hot water from anywhere. The Heatmiser neoAir is a battery powered wireless thermostat and is compatible with our RF Switch / UH8-RF Wireless Receivers. In addition, neoStat and neoAir communicate wirelessly to the neoHub to offer a reliable and scalable network system that you can control from your SmartPhone. The mains powered neoStat automatically repeats the data signal from other neoStat/neoAir in the home. If there are no neoStat's installed, the neoAir communicates directly with the neoHub and so the neoPlug or Boost can be used to extend the communication distance. The neoAir can be configured to work as a thermostat, a timer or heating & timer combined, perfect for controlling heating & hot water. Wireless Air Sensor & Door Contact Function - neoHub required When paired to the neoHub, you can use the wireless air sensor to measure the temperature remotely from the neoStat or to take an average temperature in a larger room. You can also have the heating turn off whenever a window or door is opened with the use of the door contact switch.
